PRO GRINDER ASSEMBLIES

The Pro Grinder Packages are hand-held concrete surface grinders designed to prepare concrete surfaces for coatings and simultaneously collect dust while hooked up to a vacuum. The grinder is considered a “must-have” for any industrial flooring contractor that applies floor coatings or needs to remove old coatings, carpet glue, or grind down high spots. Hand-held units are terrific for smaller jobs or in combination with walk-behind grinders on larger projects.

The grinders are designed to grind edges, tight areas, underneath fixtures, or other areas where a large floor grinder or shot blaster will not reach.

Features:

- Hand-held units that are great for smaller jobs or in combination with walk-behind grinders on larger projects
- Use on concrete for cleaning, leveling high spots or uneven floor surfaces, removing glues, mastic, epoxies and other coatings
- May be connected to a variety of dust collection systems for dust containment
- The unit’s polyurethane dust shroud is long lasting and is offered in full shrouds and convertible models that flip up to allow for edge work along walls
- Systems include an electric grinder, dust shroud (full or convertible) and hardware for mounting diamond cup wheels, ZEC wheels, or polishing pads
